Wattwise Solutions LLC

Electric rotary valve family

WW-CMP-105

An electrically driven multiport valve with encoder feedback for controlled positioning of the rotor. The family supports sample selection and flow routing in analytical instruments. Rotor material, switching arrangement and mechanical configuration are selected for the application, with the final ordering code confirmed during quotation.

Applications

- Gas chromatography
- Liquid chromatography
- Automated sampling

Technical data

Power supply	24 V / 2.5 A
Operating temperature	60–200 °C

Specifications vary with model and configuration. Contact Wattwise to confirm suitability, measurement ranges and available options for your project.
