Wattwise Solutions LLC

Multi-channel selector valve

WW-CMP-112

A motor-driven rotary selector that connects a common port to different flow paths. The valve supports configurable routing for analytical and environmental instruments. It can be incorporated into a digestion-valve assembly with a quartz tube, where coordinated valve operation forms a closed reaction chamber.

Applications

• Water analysis instruments

• Reagent routing

• Digestion assemblies

Technical data

Power supply	24 VDC / 10 W
Operating temperature	0–50 °C

Specifications vary with model and configuration. Contact Wattwise to confirm suitability, measurement ranges and available options for your project.
