Wattwise Solutions LLC

Hydrogen and zero-air generator

WW-IND-108

A compact combined generator providing hydrogen and zero-grade air for analytical instruments. The unit displays hydrogen flow and operating status, with hydrogen overpressure protection and automatic water replenishment. It supports laboratory and environmental monitoring applications that need an instrument-based gas supply.

Applications

- Gas chromatography
- Environmental laboratories
- Research laboratories

Technical data

Gas output flow	H2: 0–500 mL/min; Air: 0–2 NL/min
Interface	RS485

Specifications vary with model and configuration. Contact Wattwise to confirm suitability, measurement ranges and available options for your project.
