Wattwise Solutions LLC

Water quality IoT monitoring terminal

WW-WAT-148 / WW-WAT-150

A deployable water quality terminal with a low center of gravity for installation in urban rivers and lakes. It supports online observation of changing water conditions, helping operators investigate pollution events, oil contamination and eutrophication. The final sensor configuration should be selected for the monitoring program.

Applications

• Urban rivers

• Lakes

Technical data

Specifications vary with model and configuration. Contact Wattwise to confirm suitability, measurement ranges and available options for your project.
